Inference in Hidden Markov Models Part 2

Blake VanBerlo

Lecture 11

Readings: RN 14.2.2.

Outline

Learning Goals

Smoothing Calculations

Smoothing Derivations

The Forward-Backward Algorithm

Revisiting the Learning goals

Learning Goals

By the end of the lecture, you should be able to

- Calculate the smoothing probability for a time step in a hidden Markov model.
- Describe the justification for a step in the derivation of the smoothing formulas.

Lecturer: Blake VanBerlo

Describe the forward-backward algorithm.

Revisiting the Learning goals

The Umbrella Model

Let S_t be true if it rains on day t and false otherwise.

Let O_t be true if the director carries an umbrella on day t and false otherwise.

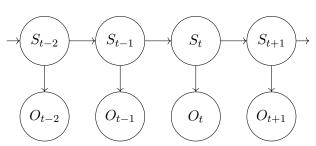

$$P(s_0) = 0.5$$

$$P(s_t|s_{t-1}) = 0.7$$

 $P(s_t|\neg s_{t-1}) = 0.3$

$$P(s_t|s_{t-1}) = 0.7$$

 $P(s_t|\neg s_{t-1}) = 0.3$ $P(o_t|s_t) = 0.9$
 $P(o_t|r) = 0.9$

Smoothing

Given the observations from day 0 to day t-1, what is the probability that I am in a particular state on day k?

$$P(S_k|o_{0:(t-1)})$$
, where $0 \le k \le t-1$

Smoothing through Backward Recursion

Calculating the smoothed probability $P(S_k|o_{0:(t-1)})$:

$$P(S_k|o_{0:(t-1)})$$
= $\alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k)$
= $\alpha f_{0:k} b_{(k+1):(t-1)}$

Calculate $f_{0:k}$ using forward recursion.

Calculate $b_{(k+1):(t-1)}$ using backward recursion.

Backward Recursion:

Base case:

$$b_{t:(t-1)} = \vec{1}.$$

Recursive case:

$$b_{(k+1):(t-1)} = \sum_{s_{k+1}} P(o_{k+1}|s_{k+1}) b_{(k+2):(t-1)} P(s_{k+1}|S_k).$$

Consider the umbrella story.

Assume that $O_0 = true$, $O_1 = true$, and $O_2 = true$.

What is the probability that it rained on day 0 $(P(S_0|o_0 \land o_1 \land o_2))$ and the probability it rained on day 1 $(P(S_1|o_0 \land o_1 \land o_2))$?

Here are the useful quantities from the umbrella story:

$$P(s_0) = 0.5$$

$$P(o_t|s_t) = 0.9, P(o_t|\neg s_t) = 0.2$$

$$P(s_t|s_{(t-1)}) = 0.7, P(s_t|\neg s_{(t-1)}) = 0.3$$

Calculate $P(S_1|o_{0:2})$.

Calculate $P(S_1|o_{0:2})$.

(1) What are the values of k and t?

$$P(S_1|o_{0:2}) = P(S_k|o_{0:(t-1)}) \Rightarrow k = 1, t = 3$$

Calculate $P(S_1|o_{0:2})$.

(1) What are the values of k and t?

$$P(S_1|o_{0:2}) = P(S_k|o_{0:(t-1)}) \Rightarrow k = 1, t = 3$$

(2) Write the probability as a product of forward and backward messages.

$$P(S_1|o_{0:2})$$
= $\alpha P(S_1|o_{0:1}) * P(o_{2:2}|S_1)$
= $\alpha f_{0:1} * b_{2:2}$

Calculate $P(S_1|o_{0:2})$.

(1) What are the values of k and t?

$$P(S_1|o_{0:2}) = P(S_k|o_{0:(t-1)}) \Rightarrow k = 1, t = 3$$

(2) Write the probability as a product of forward and backward messages.

$$P(S_1|o_{0:2})$$
= $\alpha P(S_1|o_{0:1}) * P(o_{2:2}|S_1)$
= $\alpha f_{0:1} * b_{2:2}$

(3) We already calculated $f_{0:1} = \langle 0.883, 0.117 \rangle$ in the last lecture. Next, we will calculate $b_{2:2}$ using backward recursion.

$$\begin{aligned} b_{2:2} &= P(o_{2:2}|S_1) \\ &= \sum_{s_2} P(o_2|s_2) * b_{3:2} * P(s_2|S_1) \\ &= \sum_{s_2} P(o_2|s_2) * P(o_{3:2}|s_2) * P(s_2|S_1) \\ &= \sum_{s_2} P(o_2|s_2) * P(o_{3:2}|s_2) * \langle P(s_2|s_1), P(s_2|\neg s_1) \rangle \\ &= \left(P(o_2|s_2) * P(o_{3:2}|s_2) * \langle P(s_2|s_1), P(s_2|\neg s_1) \rangle \right. \\ &+ \left. P(o_2|\neg s_2) * P(o_{3:2}|\neg s_2) * \langle P(\neg s_2|s_1), P(\neg s_2|\neg s_1) \rangle \right) \end{aligned}$$

$$b_{2:2} = P(o_{2:2}|S_1)$$

$$= \left(P(o_2|s_2) * P(o_{3:2}|s_2) * \langle P(s_2|s_1), P(s_2|\neg s_1) \rangle + P(o_2|\neg s_2) * P(o_{3:2}|\neg s_2) * \langle P(\neg s_2|s_1), P(\neg s_2|\neg s_1) \rangle \right)$$

$$= \left(0.9 * 1 * \langle 0.7, 0.3 \rangle + 0.2 * 1 * \langle 0.3, 0.7 \rangle \right)$$

$$= (0.9 * \langle 0.7, 0.3 \rangle + 0.2 * \langle 0.3, 0.7 \rangle)$$

$$= (\langle 0.63, 0.27 \rangle + \langle 0.06, 0.14 \rangle)$$

$$= \langle 0.69, 0.41 \rangle$$

Calculate $P(S_1|o_{0:2})$.

Calculate $P(S_1|o_{0:2})$.

$$P(S_1|o_{0:2})$$
= $\alpha P(S_1|o_{0:1}) * P(o_{2:2}|S_1)$
= $\alpha f_{0:1} * b_{2:2}$
= $\alpha \langle 0.883, 0.117 \rangle * \langle 0.69, 0.41 \rangle$
= $\alpha \langle 0.6093, 0.0480 \rangle$
= $\langle 0.927, 0.073 \rangle$

Calculate $P(S_0|o_{0:2})$.

Calculate $P(S_0|o_{0:2})$.

$$k = 0, t = 3$$

$$b_{1:2} = P(o_{1:2}|S_0)$$

$$= (P(o_1|s_1) * P(o_{2:2}|s_1) * \langle P(s_1|s_0), P(s_1|\neg s_0) \rangle$$

$$+ P(o_1|\neg s_1) * P(o_{2:2}|\neg s_1) * \langle P(\neg s_1|s_0), P(\neg s_1|\neg s_0) \rangle)$$

$$= (0.9 * 0.69 * \langle 0.7, 0.3 \rangle + 0.2 * 0.41 * \langle 0.3, 0.7 \rangle)$$

$$= \langle 0.4593, 0.2437 \rangle$$

Calculate $P(S_0|o_{0:2})$.

$$k = 0, t = 3$$

$$b_{1:2} = P(o_{1:2}|S_0)$$

$$= (P(o_1|s_1) * P(o_{2:2}|s_1) * \langle P(s_1|s_0), P(s_1|\neg s_0) \rangle$$

$$+ P(o_1|\neg s_1) * P(o_{2:2}|\neg s_1) * \langle P(\neg s_1|s_0), P(\neg s_1|\neg s_0) \rangle)$$

$$= (0.9 * 0.69 * \langle 0.7, 0.3 \rangle + 0.2 * 0.41 * \langle 0.3, 0.7 \rangle)$$

$$= \langle 0.4593, 0.2437 \rangle$$

$$P(S_0|o_{0:2}) = \alpha f_{0:0} * b_{1:2}$$

= $\alpha \langle 0.818, 0.182 \rangle * \langle 0.4593, 0.2437 \rangle$
= $\langle 0.894, 0.106 \rangle$

Smoothing (time k)

How can we derive the formula for $P(S_k|o_{0:(t-1)}), 0 \le k \le t-1$?

$$P(S_k|o_{0:(t-1)})$$
= $P(S_k|o_{(k+1):(t-1)} \land o_{0:k})$
= $\alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k \land o_{0:k})$
= $\alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k)$
= $\alpha f_{0:k}b_{(k+1):(t-1)}$

Calculate $f_{0:k}$ through forward recursion.

Calculate $b_{(k+1):(t-1)}$ through backward recursion.

Q #1: What is the justification for the step below?

$$P(S_k|o_{0:(t-1)})$$

= $P(S_k|o_{(k+1):(t-1)} \land o_{0:k})$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #1: What is the justification for the step below?

$$P(S_k|o_{0:(t-1)})$$

= $P(S_k|o_{(k+1):(t-1)} \land o_{0:k})$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- \rightarrow Correct answer is (B) Re-writing the expression.

Q #2: What is the justification for the step below?

$$= P(S_k | o_{(k+1):(t-1)} \wedge o_{0:k})$$

= $\alpha P(S_k | o_{0:k}) P(o_{(k+1):(t-1)} | S_k \wedge o_{0:k})$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #2: What is the justification for the step below?

$$= P(S_k | o_{(k+1):(t-1)} \wedge o_{0:k})$$

= $\alpha P(S_k | o_{0:k}) P(o_{(k+1):(t-1)} | S_k \wedge o_{0:k})$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- → Correct answer is (A) Bayes' rule.

Q #3: What is the justification for the step below?

$$= \alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k \wedge o_{0:k})$$

= \alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k)

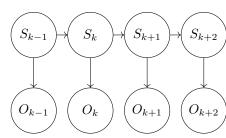

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #3: What is the justification for the step below?

$$= \alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k \wedge o_{0:k})$$

= \alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k)

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- \rightarrow Correct answer is (D) The Markov assumption.

Backward Recursion Formula Derivations

How did we derive the formula for backward recursion?

$$P(o_{(k+1):(t-1)}|S_k) = \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)} \wedge s_{(k+1)}|S_k)$$
(1)

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)} \wedge S_k) * P(s_{(k+1)}|S_k)$$
 (2)

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k)$$
(3)

$$= \sum_{s_{(k+1)}} P(o_{(k+1)} \wedge o_{(k+2):(t-1)} | s_{(k+1)}) * P(s_{(k+1)} | S_k)$$
 (4)

$$= \sum_{s_{(k+1)}} P(o_{(k+1)}|s_{(k+1)}) * P(o_{(k+2):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k)$$
 (5)

Q #4: What is the justification for the step below?

$$P(o_{(k+1):(t-1)}|S_k) = \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)} \wedge s_{(k+1)}|S_k)$$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #4: What is the justification for the step below?

$$P(o_{(k+1):(t-1)}|S_k) = \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)} \wedge s_{(k+1)}|S_k)$$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- \rightarrow Correct answer is (E) The sum rule.

Q #5: What is the justification for the step below?

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)} \wedge s_{(k+1)} | S_k)$$

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)} | s_{(k+1)} \wedge S_k) P(s_{(k+1)} | S_k)$$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #5: What is the justification for the step below?

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)} \wedge s_{(k+1)} | S_k)$$

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)} | s_{(k+1)} \wedge S_k) P(s_{(k+1)} | S_k)$$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- \rightarrow Correct answer is (C) The chain/product rule.

Q #6: What is the justification for the step below?

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)} \wedge S_k) P(s_{(k+1)}|S_k)$$

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)}) P(s_{(k+1)}|S_k)$$

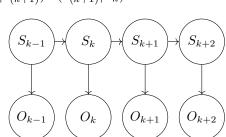

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #6: What is the justification for the step below?

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)} \wedge S_k) P(s_{(k+1)}|S_k)$$

$$= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)}) P(s_{(k+1)}|S_k)$$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- → Correct answer is (D) The Markov assumption.

Q #7: What is the justification for the step below?

$$\begin{split} &= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k) \\ &= \sum_{s_{(k+1)}} P(o_{(k+1)} \wedge o_{(k+2):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k) \end{split}$$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #7: What is the justification for the step below?

$$\begin{split} &= \sum_{s_{(k+1)}} P(o_{(k+1):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k) \\ &= \sum_{s_{(k+1)}} P(o_{(k+1)} \wedge o_{(k+2):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k) \end{split}$$

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #8: What is the justification for the step below?

$$\begin{split} &= \sum_{s_{(k+1)}} P(o_{(k+1)} \wedge o_{(k+2):(t-1)} | s_{(k+1)}) * P(s_{(k+1)} | S_k) \\ &= \sum_{s_{(k+1)}} P(o_{(k+1)} | s_{(k+1)}) * P(o_{(k+2):(t-1)} | s_{(k+1)}) * P(s_{(k+1)} | S_k) \end{split}$$

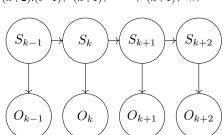

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule

Q #8: What is the justification for the step below?

$$= \sum_{s_{(k+1)}} P(o_{(k+1)} \wedge o_{(k+2):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k)$$

$$= \sum_{s_{(k+1)}} P(o_{(k+1)}|s_{(k+1)}) * P(o_{(k+2):(t-1)}|s_{(k+1)}) * P(s_{(k+1)}|S_k)$$

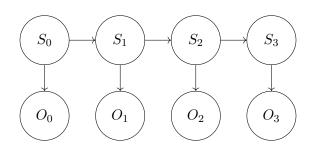

- (A) Bayes' rule
- (B) Re-writing the expression
- (C) The chain/product rule
- (D) The Markov assumption
- (E) The sum rule
- \rightarrow Correct answer is (D) The Markov assumption.

The Forward-Backward Algorithm

The Forward-Backward Algorithm

Consider a hidden Markov model with 4 time steps. We can calculate the smoothed probabilities using one forward pass and one backward pass through the network.

$$P(S_k|o_{0:(t-1)})$$
= $\alpha P(S_k|o_{0:k}) P(o_{(k+1):(t-1)}|S_k)$
= $\alpha f_{0:k} b_{(k+1):(t-1)}$

Revisiting the Learning Goals

By the end of the lecture, you should be able to

- Calculate the smoothing probability for a time step in a hidden Markov model.
- Describe the justification for a step in the derivation of the smoothing formulas.

Lecturer: Blake VanBerlo

Describe the forward-backward algorithm.
